

Multi-Location Guest Experience Comparison

Ember & Field Hospitality Group · 3 illustrative locations · September 2026

PRIVATE · FICTIONAL

Leadership discussion format

What this sheet does

Show leaders where the guest promise

holds—and where it changes by market.

This abbreviated example translates consistent anonymous guest scenarios into a comparable executive view. It distinguishes group-wide patterns from local conditions so leadership can prioritize action without reducing a brand to one number.

LOCATION + SCENARIO

Location A · suburban flagship

Friday dinner · first-time guest

Location B · urban market

Wednesday dinner · mobile booking

Location C · travel-corridor

Saturday dinner · family guest scenario

GUEST JOURNEY

88

79

73

DIGITAL PROMISE

83

74

80

OBSERVED PATTERN

Strong arrival, confident service recovery, polished food presentation.

Good hospitality; online wait-time and parking expectations were inconsistent.

Digital promise was clear; greeting, pacing, and checkout varied during peak volume.

LEADERSHIP FOCUS

PROTECT
Use as the reference for arrival and recovery standards.

REFINE
Correct guest-facing information and arrival handoff.

PRIORITIZE
Address peak-period execution before broad rollout.

Comparable category pattern

Arrival + greeting

88

Digital accuracy

79

Service pace + handoff

74

Food + beverage value

85

Checkout + return cue

67

Executive readout

The group does not have a guest-experience problem everywhere. The fictional evidence points to a stronger operational pattern at arrival and product delivery than at the end of the visit.

The highest-value next move is to standardize the guest-facing handoffs—wait expectations, pace communication, bill presentation, and return invitation—then measure whether the gap closes across markets.

Scores organize the leadership conversation; narratives, evidence, and local context determine the action.

Fictional brands, locations, scores, and observations. This five-page sample shows format only; actual scope, scoring, and reporting are customized.

THE GUEST'S-EYE VIEW · CONFIDENTIAL SAMPLE

From location scores to accountable next steps

CROSS-MARKET FINDING

Guest-facing wait expectations vary by channel and location.

Peak-period service pace is less predictable at one location.

Checkout closes the transaction but does not invite a return.

Arrival + recovery standards are a group strength.

WHY LEADERSHIP SHOULD CARE

The digital promise and arrival reality can conflict before service begins, especially in urban and

peak-volume markets. Location C's guest experience shifts when volume rises; broad brand training alone may not solve

staffing or handoff constraints. The weakest shared category is a retention

opportunity: the last 90 seconds are not consistently treated as part of the brand

experience. Location A demonstrates a repeatable guest-centered behavior that can be protected and shared without forcing a scripted interaction.

SCOPE

SYSTEMIC

LOCAL

SYSTEMIC

PROTECT

OWNER

Marketing + operations

Regional operations

Brand + field leaders

Operations + training

FIRST 60 DAYS

Publish one approved wait-time and parking-information standard; validate weekly across web, listings, host language, and reservation messaging. Observe two comparable peak shifts; identify the exact handoff point and test a location-specific adjustment before systemwide change. Pilot two guest-first closing cues, then track operational adoption and direct return engagement—not only a scripted line.

Capture the behavior in a peer-learning example; verify transfer through follow-up field observations.

The decision framework

PROTECT

Group strengths that create guest confidence and should remain visible in training and field leadership.

PRIORITIZE

High guest-impact friction that should receive a named owner, timely test, and direct follow-up.

REFINE

Shared process opportunities that need clearer standards, ownership, or guest-facing language.

LOCALIZE

Location-specific constraints that need local diagnosis before leadership assumes a systemwide issue.

A national engagement can include

- Comparable guest scenarios across selected markets
- Brand-standard and digital-promise review
- Location-level narratives with executive pattern analysis
- Systemic-versus-local priority register
- Leadership debrief and optional follow-up cadence

SCAN TO REQUEST PRIVATE AUDIT INFORMATION

Fictional example only. It does not represent a real brand, location, employee, guest, or operational finding. Actual programs are scoped around approved markets, scenarios, travel, leadership questions, and confidentiality requirements.

THE GUEST'S-EYE VIEW • CONFIDENTIAL SAMPLE

The operating principle

A multi-location audit should reveal patterns without erasing local context.

A national program begins with an agreed evaluation framework: what every location must deliver, what may vary by market, and which guest moments carry the most brand risk. The same framework is then applied through calibrated scenarios, evidence standards, and executive reporting.

CALIBRATION CONTROL

Brand promise and location archetype

Scenario, party, daypart, and spend range

Evidence and narrative standard

Systemic-versus-local review

What the field lens can include

Digital discovery and accuracy · reservation / booking flow · arrival and first acknowledgment · service pacing · product knowledge · guest recovery · cleanliness and physical standards · payment / checkout · return invitation · review and retention signals

WHY IT MATTERS

Sets what the guest should reasonably expect in every market and what varies by concept or trade area. Controls the guest journey so reported differences reflect the experience—not a radically different test. Connects observation, guest feeling, business implication, owner, and a measurable next step. Every finding is tested for recurrence across markets, teams, channels, and dayparts.

LEADERSHIP DECISION ENABLED

Distinguish a brand-standard lapse from an approved local adaptation. Compare execution, service pace, and value perception on a credible basis. Act on evidence instead of debating isolated anecdote or score. Avoid broad fixes for one local issue—or ignoring a pattern that deserves system action.

Evidence guardrails

The program observes a normal guest experience. It does not provoke employees, create safety issues, seek unwarranted compensation, review personnel files, or replace regulated quality, security, food-safety, or legal-compliance functions.

COMPARABLE DOES NOT MEAN IDENTICAL

A flagship, airport, resort, urban, franchise, and travel-corridor property may not operate the same way. The program separates approved local variation from the guest-facing standards that should travel everywhere.

Fictional methodology illustration. Actual scenarios, markets, field protocols, and report categories are agreed in the engagement scope.

What leaders should see before they scale a fix

4

SHARED FINDINGS

1

LOCAL OUTLIER

2

PROTECT + REPEAT

CATEGORY	A	B	C	INTERPRETATION
Arrival acknowledgment	90	86	76	Shared asset with a peak-period variance at Location C. Preserve standard; diagnose peak staffing and host handoff locally.
Digital arrival / parking accuracy	85	73	79	Cross-market inconsistency. Treat guest-facing practical information as a system-owned standard.
Service pace + handoffs	88	78	65	Location C is an outlier. Validate through comparable follow-up visits before training every market to a local constraint.
Food + beverage value	89	84	82	Core product is a group strength. Use it as the foundation—not the excuse—to fix surrounding friction.
Checkout + return invitation	70	66	65	Clear shared opportunity. The last guest minutes need a brand-appropriate relationship cue.

A disciplined executive readout

SYSTEMIC

Repeatable friction across markets, channels, or leadership routines. Requires an owner and an enterprise-level correction.

PROTECT

A guest-confidence behavior worth naming, recognizing, and making visible across the field.

LOCAL

A real location issue that should not become a blanket diagnosis. Requires local operating context and a location-specific experiment.

MONITOR

A pattern that needs a second scenario, shift, or market before leaders make an expensive decision.

Fictional leadership conclusion

The right answer is not “raise every score.”

The useful decision is to protect the group's authentic hospitality strengths, standardize the information and closing moments that should be consistent, and diagnose the one market where peak execution changes the guest's experience. The report makes that hierarchy visible.

Pattern recognition is the value of a multi-location program. One location tells a story. A calibrated group view tells leadership where the system, the market, or the operating model deserves attention.

A reporting cadence built for decisions, not binders

01 · Align**Design the field lens.**

Confirm markets, location mix, scenario controls, brand standards, leadership questions, escalation rules, and deliverable audiences.

02 · Observe**Collect comparable evidence.**

Conduct approved guest scenarios and digital reviews, preserving local context while using a shared evidence and narrative standard.

03 · Act**Turn patterns into ownership.**

Deliver location narratives, an enterprise pattern view, priority register, leadership discussion, and optional follow-up verification.

Potential reporting package

AUDIENCE	DECISION-READY DELIVERABLE
Executive leadership	Cross-market comparison, systemic-versus-local priority register, shared strengths, risks, and recommended governance questions.
Regional or field leadership	Location narrative, guest journey chronology, evidence context, local action owners, timing, and success measures.
Brand and marketing	Digital-promise review, guest-facing accuracy findings, conversion barriers, and retained-guest opportunities.
Operations and training	Protect-and-repeat examples, operational handoffs, service-recovery observations, and follow-up validation targets.

Program fit

This format can be scoped for corporate restaurant brands, franchisors, management companies, hotel groups, resorts, specialty retail concepts, or regional portfolios. It can start with a pilot market, a location cohort, a specific guest journey, or a full multi-market program.

CONFIDENTIAL BY DESIGN

Findings are intended for designated leadership. This is not a public-review, employee-ranking, or surprise “gotcha” program. Scope, distribution, escalation, and confidentiality are set before fieldwork begins.
